

2500W Immersion Heater Element

This immersion heater element is designed for water heaters. It features a hairpin bend configuration with dual parallel heating rods.

Product Overview

High-Performance Immersion Heater

This 2500W immersion heating element is engineered for reliable water heating applications. Featuring a durable red copper construction with nickel plating, it offers excellent corrosion resistance and longevity. The hairpin bend configuration and dual rod design ensure efficient heat distribution, making it an ideal choice for domestic water heating systems.

Technical Specifications

Power Rating

2500 W

Rated Power

Voltage Compatibility

110V, 220-240V

Model

36NP-1

Physical Dimensions

Length

40 cm

Pipe Diameter

8/8.5mm

Materials & Construction

Material Composition

Component	Material
Heating Pipe	Red copper with nickel plating
Flange	Brass with nickel plating

Application

Recommended Use

Domestic water heating
