

250A DC Inverter Welder

This DC inverter welder is a compact and efficient solution for various welding applications. It delivers up to 250A of DC welding current with precise control through current display and regulation.

Product Overview

Professional DC Inverter Welder

This high-performance 250A DC inverter welding machine is engineered for versatility and precision in professional and workshop environments. Utilizing advanced IGBT technology, it offers stable current regulation and efficient heat dissipation via an integrated cooling system. Designed for portability, the unit provides a flexible solution for a wide range of welding applications.

Technical Specifications

Current Range

250 A

Max Welding Current

20 A

Min Welding Current

Power Input

110V or 220V $\pm 15\%$, 50/60Hz

Core Technology

Inverter IGBT, DC Output

Safety & Protection

Safety Features

- Integrated cooling fan
- DZ47-63 C32 circuit breaker
- Overload protection (4500A rating)
