

250W Polycrystalline Solar Panel Module

This 250W polycrystalline solar panel module is designed for optimal energy conversion. With a solar cell efficiency of 18-21%, it maximizes power output while maintaining reliability and durability.

Product Overview

High-Efficiency Solar Solution

This 250W polycrystalline solar panel module is engineered for optimal energy conversion and long-term reliability. Featuring a robust construction, it is designed to withstand diverse environmental conditions while maintaining consistent power output. It serves as an ideal sustainable solution for a wide range of residential, commercial, and industrial renewable energy applications.

Technical Specifications

Rated Power	250 W
Cell Technology	Polycrystalline

Performance Metrics

Solar Cell Efficiency

18 % Min Efficiency	21 % Max Efficiency
-------------------------------	-------------------------------

Application Suitability

Suitable Applications	Residential, Commercial, Industrial, On-grid, Off-grid
-----------------------	--

Quality & Certification

Key Features

- Robust construction
- High energy conversion rate
- Long-term reliability
