

250W Polycrystalline Solar Panel Module

This 250W polycrystalline solar panel module is designed for high efficiency. It features robust construction ensuring durability and reliable power output.

Overview

High-Efficiency Polycrystalline Module

This 250W polycrystalline solar panel module is engineered for both residential and commercial renewable energy applications. Designed for maximum reliability, it features robust construction to ensure long-term durability and consistent power output. With advanced solar cell efficiency ranging from 18-21%, this module is an excellent choice for optimizing energy conversion in both grid-tied and off-grid solar power systems.

Technical Specifications

Construction Features

- Robust construction
- Long-term durability
- Reliable performance

Module Type

Polycrystalline

Suitable Applications

Residential, Commercial, Industrial, Grid-tied, Off-grid
