

275W Solar Module for On-Grid Systems

This solar module is designed for use in on-grid system projects. It provides a sustainable and cost-effective energy solution.

Overview

High-Efficiency 275W Solar Module

This 275W polycrystalline solar module is engineered for both residential and commercial applications, offering a robust and reliable energy solution. Designed with advanced cell technology, it maximizes energy conversion efficiency to ensure consistent power output. Its sturdy construction and ease of installation make it an ideal choice for grid-tied solar power systems, providing a sustainable and cost-effective path to energy independence.

Key Features

Performance Metrics

275 W

Power Output

Module Type

Polycrystalline

Installation & Design

- Sturdy construction for long-term reliability
- Designed for easy installation
- Optimized for on-grid systems

Applications

Intended Use

Residential, Commercial, Grid-Tied Systems
