

3-10T Rough Terrain Forklift

This rough terrain forklift is adaptable to various surface conditions, making it suitable for operation on soft soils, grass, and mine sites. An extensive range of attachments is available to extend its working capacity for heavy-duty mining projects.

Overview

Robust Material Handling

This range of rough terrain forklifts is engineered to provide reliable performance in the most demanding outdoor environments. With lifting capacities spanning 3 to 10 tons, these machines are ideally suited for uneven surfaces found at construction sites, lumber yards, and large-scale agricultural operations. Key design elements such as heavy-duty tires, high ground clearance, and powerful engines ensure stability and efficiency during off-road material handling tasks.

10 T

Maximum Capacity

Performance Features

Performance Features

- Heavy-duty off-road tires
- High ground clearance design
- High-torque industrial engine
- Robust chassis for rough terrain

Terrain Compatibility

Construction Sites, Lumber Yards, Agricultural Operations, Uneven Surfaces, Off-road
