

3-9kW Water Heater Heating Element

This 3-9kW heating element is designed for water heaters. It is constructed from durable metal and features a hexagonal base for secure mounting and multiple U-shaped tubes for efficient heat distribution.

Product Overview

High-Efficiency Heating Solution

This robust 3-9kW heating element is engineered for reliable performance in both residential and commercial water heating applications. Featuring a durable metal construction and a secure hexagonal mounting base, it ensures longevity and ease of installation. The design utilizes multiple U-shaped tubes to maximize heat distribution efficiency, providing consistent and rapid heating.

Technical Specifications

Power Range

3 kW Minimum Power	9 kW Maximum Power
------------------------------	------------------------------

Application Compatibility

Residential Water Heating, Commercial Water Heating

Design & Construction

Key Features

- Secure hexagonal mounting base
- Efficient heat distribution design
- Suitable for heavy-duty applications

Construction Material	Durable Metal
Mounting Type	Hexagonal Base
Heating Element Geometry	Multiple U-shaped tubes
