

3-Channel DSP Amplifier Module for Active Speakers

This 3-channel DSP amplifier module is designed for active speakers. It features a compact design with various electronic components and connectors for power and signal input/output.

Product Overview

High-Performance DSP Integration

This 3-channel digital power amplifier module is engineered specifically for active speaker systems, offering robust amplification combined with advanced digital signal processing. The compact, high-efficiency design incorporates high-quality electronic components, including precision capacitors and inductors, ensuring reliable audio performance. With versatile connectivity options such as AES3 output and comprehensive controller interfaces, this module is an ideal solution for professional integration into active speaker cabinets.

Technical Features

Channels	3
DSP Functionality	Yes

Connectivity & Interface

Power Management

- Integrated Power Switch
- Fuse Protection

Interface & I/O	Controller Interface, Link, Input, AC Input, 3-in-1 AC Link, AES3 Output
-----------------	--

Construction

Internal Components

Capacitors • Toroidal Inductors • Resistors • Integrated Circuits
