

# 300 kW Rooftop Solar Energy System

This 300 kW solar energy system is designed for rooftop installation. It provides a complete and sustainable energy solution for residential properties.

## System Overview

### High-Efficiency Rooftop Solar Solution

This 300 kW rooftop solar energy system represents a robust and scalable solution for modern energy needs. Designed for seamless integration, the system provides a reliable source of sustainable power. Having been successfully commissioned, it serves as a proven example of standardized renewable energy infrastructure.

### Performance Metrics

**300 kW**

Total System Capacity

## Installation Details

Location	Colorado, USA
Completion Date	April 2011
System Attributes	Rooftop Installation, Solar Energy, Grid-Connected
