

300 Ton Multi-Point Automatic Shaft Straightening Machine

This machine utilizes servo and transmission technology to improve efficiency in every process. It achieves high straightening precision, reaching up to 0.01mm.

Overview

High-Precision Shaft Straightening Solution

This 300-ton multi-point automatic straightening machine is engineered for the precise bend removal and straightening of heavy shafts. Featuring a robust hydraulic system and advanced control interface, it ensures high accuracy and efficiency in demanding industrial metal forming processes. The machine's rigid frame construction guarantees long-term stability and reliability, while integrated safety mechanisms provide a secure operating environment.

Technical Specifications

Straightening Force

300 Ton

Force Capacity

Capabilities

- Multi-point straightening
- Automated operation
- Heavy shaft processing
- Bend removal

Features & Safety

Construction

Rigid frame • Durable construction • High-precision

Safety Equipment

Protective cage, Emergency stop mechanisms
