

30000 tons/year Detergent Production Line

This production line has a project scale of 30000 tons per year. It is designed for the large-scale manufacturing of detergent.

Overview

Industrial Detergent Production Solution

This automated production facility is engineered to deliver a consistent annual capacity of 30,000 tons. Designed for large-scale industrial operations, the system integrates advanced chemical processing units to meet high-volume manufacturing demands. The facility focuses on efficiency and compliance, supported by specialized energy and environmental engineering standards.
