

30T Excavator Hydraulic Compactor Plate

This hydraulic compactor plate is designed for 30-ton excavators. It is engineered for efficient soil, trench, and asphalt compaction in road construction, building foundations, and pipeline projects.

Product Overview

High-Efficiency Hydraulic Compaction

This hydraulic compactor plate is engineered for heavy-duty soil compaction and foundation backfilling. Designed for 20-30 ton excavators, it features a smooth wear plate and a robust hydraulic system to effectively compact pith, sand, soft stone, hard soil, and clay. Its large contact area ensures high efficiency for road construction, trenching, and building foundation projects.

Technical Specifications

Carrier Weight

20 T

Min Carrier Weight

30 T

Max Carrier Weight

Design Features

- Smooth wear plate base
- Hydraulic-driven vibration system
- Large contact area for efficiency
- Robust heavy-duty steel frame
- Integrated hydraulic control valve

Suitable Materials

Pith, Sand, Soft Stone, Hard Soil, Clay, Foundation Backfill

Applications

Primary Applications

Road Construction • Trench Compaction • Foundation Preparation • Pipeline Projects
