

316L Stainless Steel Water Well Casing Pipe with Wedge Wire Screen

This 316L stainless steel water well casing pipe is designed for efficient water filtration and structural support in well construction. The wedge wire screen prevents sand and gravel from entering the well while allowing optimal water flow.

Product Overview

High-Performance Well Casing

This 316L stainless steel water well casing pipe is engineered for superior structural integrity and efficient water filtration in demanding well construction projects. Featuring a precision-crafted wedge wire screen, it effectively prevents sand and gravel ingress while maintaining optimal flow rates. Its durable composition ensures excellent corrosion resistance, making it an ideal choice for groundwater extraction, environmental monitoring, and industrial filtration applications.

Material & Construction

Material Grade	316L Stainless Steel
Key Features	Corrosion Resistant, Sand Control, High Structural Integrity, Optimal Flow

Applications

Primary Applications

- Water Well Construction
- Groundwater Extraction
- Environmental Monitoring
- Industrial Filtration
