

3200W Diamond Core Drill for Concrete and Masonry

This diamond core drill features a robust 3200W motor, delivering high torque for optimal performance in both wet and dry drilling applications. It is designed for drilling precise holes in concrete, brick, block, and other masonry materials.

Overview

Professional Diamond Core Drill

This 3200W diamond core drill is engineered for heavy-duty drilling in concrete, brick, and masonry materials. It features a robust motor designed for high-intensity, continuous operation, ensuring reliability on demanding job sites. With integrated safety features like a mechanical clutch and a specialized water cooling system, it offers both precision and durability for construction, plumbing, and electrical professionals.
