

335W Polycrystalline Solar Panel

This is a high-efficiency polycrystalline solar module with a 335W power output. It is designed for 1500V system voltage and features a 12 busbar (12BB) configuration.

Overview

High-Efficiency 335W Polycrystalline Module

This high-efficiency polycrystalline solar module is engineered to deliver a robust power output of 335W, making it a reliable choice for diverse solar energy applications. Designed to support 1500V system voltage, it ensures compatibility with modern, large-scale installations. The advanced 12 busbar (12BB) configuration significantly enhances performance and durability, providing consistent energy generation for professional solar projects.

Technical Metrics

Rated Power Output

335 W

Power Output

Maximum System Voltage	1500 V
Busbar Technology	12BB (12 Busbar)
Cell Technology	Polycrystalline

Certifications & Features

Key Features	High Efficiency, 1500V Compatible, 12BB Technology
