

# 33kV Porcelain Composite Post Insulator

This high-voltage composite post insulator is designed for power transmission and distribution systems. Suitable for 33kV applications, it provides insulation and mechanical support for conductors.

## ADDITIONAL IMAGES

## Product Overview

### High-Performance 33kV Post Insulator

This high-voltage composite post insulator is engineered for reliable performance in power transmission and distribution systems. Designed specifically for 33kV applications, it provides essential electrical insulation and robust mechanical support for conductors. Constructed with high-quality porcelain and composite materials, this insulator offers excellent dielectric strength and weather resistance, ensuring durability in demanding overhead line environments.

## Technical Specifications

Engineered for superior electrical insulation and mechanical support in transmission systems.

### Certifications

CE • ISO 9001

### Rated Voltage

33 kV

### Material

Porcelain and Composite

### Application

Power Transmission, Power Distribution, Strain Applications, Suspension, Electrical Sub-stations

## Company Standards

### Manufacturing Capabilities

- OEM Service Available
- Free Samples Available
- Export to 50+ Countries

### Warranty Period

1 Year

### Standard Lead Time

15 Days
