

# 3600W Monoblock Class D Car Amplifier

This monoblock Class D car amplifier provides up to 3600W of power for car audio systems. It features adjustable gain control and a low-pass filter for precise audio tuning.

## ADDITIONAL IMAGES

## Overview

### High-Performance Monoblock Class D Amplifier

This 3600W Monoblock Class D Car Amplifier is designed to deliver substantial power and high efficiency for demanding automotive audio systems. Its compact, all-metal design ensures robust heat dissipation while providing precise control over subwoofer performance through adjustable filters. Ideal for professional car audio installations, it combines high power output with comprehensive protection circuitry for long-term reliability.

## Power Performance

### Power Specifications

**3600 W**  
Peak Power

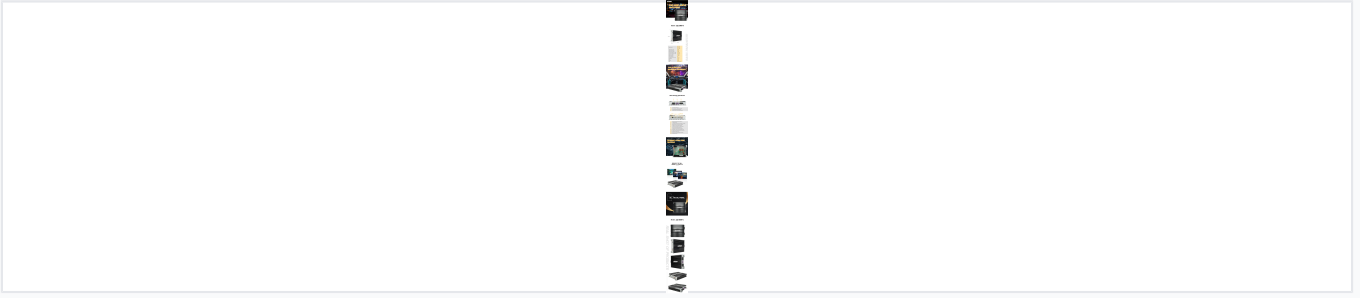

**1200 W**  
RMS Power Output

## Audio Tuning

### Audio Control Features

- Variable Input Level Control
- Adjustable Low Pass Filter
- Subsonic Filter
- Bass Boost Control
- Master/Slave Signal Cable Inputs

## Technical Specifications

Detailed view of the all-metal panel construction and internal structure of the 1200W Class D amplifier.

### Amplifier Class

Class D

### Channel Configuration

Monoblock (1 Channel)

### Chassis Material

All-Metal Panel

## Protection & Safety

### Integrated Protection

Overcurrent Protection, Overheating Protection, Short Circuit Protection, Over-voltage Protection, Fuse Insurance Protection

## Connectivity

### Input/Output Terminals

- RCA Signal Inputs
- High-Current Power Input Terminals
- Speaker Output Terminals
- Input Signal Input
