Product Overview

High-Performance 36V Portable Marine Ventilator

This portable ventilation unit is engineered with a durable metal construction and a pure copper motor for long-lasting, reliable service in demanding environments. It utilizes CAD-optimized blade and air outlet designs to deliver high-volume airflow and pressure, making it ideal for specialized tasks in shipyards, tunnels, and underground projects. Designed for portability, the unit features a sturdy handle and an adjustable base for precise directional airflow.

Technical Specifications

Voltage	36V
Motor Technology	Pure copper motor
Design Methodology	CAD optimized blades and air outlet

Applications & Usage

Operational Capabilities

- Intake ventilation
- Exhaust ventilation
- Air circulation
- Cooling and drying support

Suitable Environments	Underground Projects, Telecommunications, Repairing Tunnels, Shipyards, Factories
-----------------------	---

Construction & Safety

Safety Components

- Protective safety grille
- Low voltage operation
- Sturdy integrated handle
- Adjustable stand
