Product Overview

Professional Utility Termination

The 3/8 Inch Guy Grip Dead End is a specialized hardware component designed for terminating stay wires in overhead transmission and distribution systems. Engineered for reliability, these grips provide a secure, high-strength connection that distributes stress evenly along the wire to prevent damage and slippage. Suitable for use on single wood poles and various tower structures, this solution simplifies installation while ensuring long-term structural integrity in demanding environments.

Technical Specifications

Suitable Applications

- Overhead transmission systems
- Distribution construction
- Single wood poles
- Large tower structures
- Microwave towers

Compatible Wire Size

3/8 inch

Material Features

High-Strength Steel, Galvanized, Corrosion Resistant

Features & Benefits

Product Highlights

Easy Installation • No Specialized Tools Required • Even Stress Distribution • Weather Resistant

Performance Overview

3 8 inch
