

395W Monocrystalline Solar Panel for Home Use

This 395W solar panel is designed for residential solar systems. The monocrystalline module provides optimal energy production and integrates seamlessly into any rooftop.

Product Overview

High-Efficiency Residential Solar Solution

This 395W monocrystalline solar panel is specifically engineered for residential applications, combining high energy conversion efficiency with a sleek, full-black aesthetic. Its advanced cell technology maximizes sunlight absorption even in varied conditions, making it an ideal choice for homeowners looking to reduce their carbon footprint. The robust construction includes durable tempered glass and a reinforced frame, ensuring long-term reliability and weather resistance on any rooftop.

Technical Specifications

Power Output

395 W

Rated Power

Cell Technology

Monocrystalline, High-Efficiency

Features

Key Design Attributes

- Full black aesthetic for modern rooftops
- Durable tempered glass protection
- Reinforced frame construction
- Optimized for residential solar arrays

Durability

Weather Resistant • Long-term Reliability
