

3D Holographic LED Advertising Display

This 3D holographic display utilizes rotating LED technology to create high-impact visuals. It is designed for versatile content display in retail environments, exhibitions, and events.

Product Overview

Innovative 3D Holographic Display

This holographic advertising display utilizes ultra-high density LED light bands and wireless power technology to create stunning, suspended 3D visual effects. By leveraging the principle of human visual persistence, it offers a distinct advantage over traditional 2D displays, providing a naked-eye 3D experience that captures attention. Designed for versatility, this unit is ideal for retail environments, shopping malls, conference activities, and exhibitions.

Technical Specifications

Display Technology	Rotating LED light band with wireless power supply
Visual Effect	Naked-eye 3D holographic projection

Key Features

Installation & Usability

- Convenient installation with included mounting bracket
- Easy content replacement
- Multiple unit combination support
- Energy efficient design

Ideal Applications

Shopping Malls, Conference Activities, Office Buildings, Hotels, Exhibitions, Retail Stores
