

# 3V Lithium Coin Cell Battery CR2032

This 3V lithium coin cell battery is commonly used in small electronic devices. It is a non-rechargeable lithium manganese dioxide battery.

## ADDITIONAL IMAGES

## Product Overview

### High-Performance Lithium Coin Cell

This 3V Lithium Manganese Dioxide coin cell battery is engineered for reliability and longevity in small electronic devices. It has undergone rigorous aging tests, demonstrating performance metrics in impedance, mass loss, and capacity retention that compare favorably to international industry standards. This battery features a patented technology, ensuring consistent power delivery for demanding applications.

## Technical Specifications

Nominal Voltage	3 V
Chemistry	Lithium Manganese Dioxide
Model	CR2032

## Quality & Compliance

### Quality Testing

- 60°C aging test
- 100 days duration
- Impedance stability
- Mass loss control
- Capacity retention

Patent Information	ZL 2014 1 0399482.2 (Registered Oct 03, 2017)
--------------------	---

## Usage & Safety

### Disposal

Non-rechargeable • Single-use only • Dispose per local regulations

Common Applications	Watches, Calculators, Remote Controls, Medical Devices
---------------------	--
