Product Overview

High-Performance 4-Inch Submersible Pump

The BH SERIES 4" submersible pump is engineered for efficient and reliable water extraction from narrow wells and boreholes. Featuring a multi-stage impeller design and durable stainless steel construction, it delivers high pressure and flow rates for demanding environments. This versatile pump is ideal for residential water supply, agricultural irrigation, and industrial dewatering applications where longevity and corrosion resistance are paramount.

Key Performance Metrics

Performance Highlights

4 inch

Pump Diameter

1 Multi-stage

Design Type

Technical Features

Motor Protection

- Overheating protection
- Voltage fluctuation safeguard
- Integrated check valve to prevent backflow

Construction Material

Durable Stainless Steel

Corrosion Resistance

Yes

Applications

Target Applications

Irrigation, Domestic Water Supply, Industrial Water Transfer, Borehole Extraction, Dewatering

Installation & Maintenance

Design Benefits

Compact Design • Easy Installation • Low Maintenance • Narrow Well Compatible
