

4-Row Mounted Potato Planter

The 4-row mounted potato planter is a robust machine designed for accurate and consistent planting. It features adjustable row spacing and precision planting units to ensure optimal seed placement and emergence.

Overview

Professional 4-Row Potato Planting Solution

This robust and efficient 4-row mounted potato planter is engineered for accurate and consistent planting performance. Designed for professional agricultural operations, it features a large capacity hopper to support extended field work and adjustable row spacing to adapt to diverse farming requirements. The precision planting units ensure optimal seed placement and uniform emergence, helping to maximize yields while reducing labor costs.

Technical Specifications
