

4-Way Signal Splitter 5-1000MHz

This 4-way splitter is designed for splitting a single input signal into four output signals. It operates within a frequency range of 5-1000MHz and is suitable for various communication applications.

Product Overview

Professional Signal Distribution

This 4-way signal splitter is engineered to efficiently divide a single input signal into four distinct output signals. Designed for reliable performance within the 5-1000MHz frequency range, it is an ideal solution for complex cable television and satellite distribution networks. Its robust metallic enclosure and secure screw-on connectors ensure signal integrity and durability in professional installation environments.

Technical Specifications

Frequency Range

5 MHz

Min Frequency

1000 MHz

Max Frequency

Output Capacity

4 ports

Design & Build

Connector Type

Screw-on

Enclosure Material

Metallic

Applications

Primary Applications

CATV, Satellite Installation, Signal Distribution
