

400G Reverse Osmosis Water Purifier

This reverse osmosis water purifier provides a 400G flow rate for rapid water purification. Its multi-stage filtration system includes PP, RO, and C2 filters to remove sediment, chemicals, and other contaminants.

Product Overview

High-Efficiency 400G RO System

This 400G reverse osmosis water purifier is engineered for high-capacity household water filtration, delivering rapid purification rates. The system utilizes a multi-stage filtration process including PP sediment filters, RO membranes, and C2 carbon filters to effectively remove contaminants. Its compact, user-friendly design ensures straightforward maintenance and includes an integrated indicator for monitoring filter status and system performance.
