

# 445 KWp Rooftop Solar Power System

This 445 KWp solar power system is designed for rooftop installation. The system converts sunlight into electricity.

## System Overview

### Professional Rooftop Solar Solution

This 445 KWp rooftop solar power system provides a robust solution for large-scale renewable energy generation. Originally completed in March 2010, the installation utilizes reliable module technology designed for high-efficiency performance on flat rooftop surfaces. The system is engineered for stability and optimal ventilation, ensuring long-term operational effectiveness for industrial or commercial energy needs.

## Technical Specifications

### Total System Capacity

**445 KWp**  
System Size

### Module Type

CS6P

## Project Details

### Installation Location

Winsted, CT, USA

### Completion Date

March 2010

## Installation Features

### Installation Characteristics

Rooftop Mounted, Grid-Tied, Flat Roof
