

# 4,6-Dichloropyrimidine Chemical Intermediate

4,6-Dichloropyrimidine is a chemical compound widely utilized as an intermediate in organic synthesis. It is essential in the production of pharmaceuticals, agrochemicals, and various specialty chemicals.

## Product Overview

### 4,6-Dichloropyrimidine Chemical Intermediate

4,6-Dichloropyrimidine serves as a vital chemical intermediate used in various industrial synthesis applications. This compound is typically supplied in secure, durable industrial packaging designed for safe storage and chemical transportation. It is a specialized building block intended for professional use in chemical manufacturing processes.

## Packaging and Logistics

Packaging Type	Cylindrical industrial drum
Container Material	Metal or durable composite
