

470 Series Single Reduction Axle for Heavy-Duty Vehicles

This single reduction axle is designed for heavy-duty vehicle applications. Its single reduction gear set optimizes torque delivery and efficiency.

Overview

Robust Drivetrain Engineering

The 470 series single reduction axle is a robust and reliable drivetrain component designed specifically for heavy-duty vehicle applications. Featuring an optimized single reduction gear set, this axle ensures superior torque delivery and operational efficiency. Its high-strength steel housing is engineered to resist bending and twisting, while precision-engineered bearings and seals contribute to a smooth operation and extended service life.
