

4D95 Engine Cylinder Block

This cylinder block is a high-quality engine component designed for optimal performance and durability. Featuring robust construction and precise machining, it ensures precise fitment and reliable operation within the 4D95 engine.

Product Overview

4D95 Cylinder Block

This cylinder block is designed specifically for the 4D95 engine, serving as the core structural framework for cylinders and internal components. It features precision-engineered passages for coolant and oil circulation, which facilitate optimal thermal management and reliable lubrication. Built for durability and performance, this component provides a solid foundation for engine rebuilds or replacements.

Technical Specifications

Compatible Engine Model	4D95
-------------------------	------

Logistics & Supply

Packaging Standard	Free-fumigation Wooden-box
--------------------	----------------------------

Product Capabilities

Available Related Components

- Cylinder Heads
- Crankshafts
- Camshafts
