

4JB1 Diesel Engine Water Pump

This diesel engine water pump is suitable for various machinery, providing efficient cooling for optimal performance. It circulates coolant through the engine block and radiator, preventing overheating and maintaining a stable operating temperature.

Product Overview

Reliable Cooling for 4JB1 Engines

The 4JB1 diesel engine water pump is an essential component designed to maintain optimal operating temperatures for 4JB1 diesel engines. By efficiently circulating coolant through the engine block and radiator, it prevents overheating and ensures the longevity and performance of your machinery. This pump is specifically engineered for robust, industrial-grade reliability in demanding agricultural and drainage applications.

Technical Specifications

Compatible Engine Model	4JB1
Engine Type	4-Cylinder Diesel
Fuel Injection	Direct Injection

Application

Key Benefits

- Efficient cooling circulation
- Prevents engine overheating
- Designed for durability in demanding environments
- Supports stable operating temperatures

Primary Applications	Agricultural, Industrial, Drainage Systems, Irrigation Systems
----------------------	--
