Product Overview

High-Efficiency Deep Well Extraction

The 4SE series submersible deep well pump is engineered for reliable water extraction from boreholes and deep wells. Constructed from durable, corrosion-resistant stainless steel, this unit is suitable for potable water applications, irrigation, and industrial water supply. Its high-performance motor ensures consistent flow and pressure, while the design facilitates straightforward installation and long-term maintenance.

Technical Specifications

Power Output

2 HP Horsepower	1.5 kW Power
---------------------------	------------------------

Electrical Requirements

- Voltage: 220V
- Frequency: 50Hz
- Phase: Single Phase (1~)

Rotational Speed

2850 r/min

Performance Data

Flow and Head Performance

Flow Rate (L/min)	Head Height (m)
20	124
60	99
100	41

Compliance & Certification
