

5-1000MHz Power Inserter

Power inserter designed for 5-1000MHz frequency range. It is suitable for various machinery and industrial applications requiring power insertion, with all ports rated at 60VAC 15A maximum.

Product Overview

Professional Grade Power Inserter

This 5-1000MHz power inserter is a robust industrial component designed to integrate power efficiently into RF transmission systems. Engineered for high-capacity applications, it supports a wide frequency range and is capable of handling demanding electrical loads. Its versatile design makes it a reliable solution for various industrial machinery and signal distribution setups requiring stable power injection.

Technical Specifications

Frequency Range	5-1000MHz
Voltage Rating	60 VAC
Maximum Current	15 A
Port Rating	All ports rated at 60VAC 15A max

Compliance and Usage

Target Applications	Industrial Machinery, Signal Distribution, RF Systems
