

50 MW Heavy Fuel Power Plant Project

Implementation began in 2010 on a 50 MW heavy fuel power plant. This project involves power engineering and construction of circular concrete foundations and cylindrical steel structures.

Project Overview

50 MW Heavy Fuel Power Plant Implementation

This project involves the comprehensive implementation of a 50 MW heavy fuel power plant, originally initiated in 2010. Located in Daudkandi, Baghabari, Bangladesh, the facility is designed to bolster regional power generation capabilities. The project integrates complex engineering and construction services to deliver a robust energy solution.

Technical Specifications

Power Output

50 MW
Capacity

Fuel Source

Heavy Fuel Oil (HFO)

Project Details

Implementation Start

2010

Site Location

Daudkandi, Baghabari, Bangladesh

Project Scope

Power Engineering, Foreign Contracting, Infrastructure Construction
