

50 Ohm Coaxial Cables - LMR400, LMR600, RG58, RG213, RG214

These are 50 Ohm coaxial cables including LMR400, LMR600, RG58, RG213, and RG214 types. The cables are designed for various communication applications, offering reliable signal transmission with specified impedance.

Overview

High-Performance 50 Ohm Coaxial Solutions

These 50 Ohm coaxial cables, including LMR400, LMR600, RG58, RG213, and RG214, are engineered for reliable signal transmission in diverse communication environments. Each cable type features specialized construction materials and advanced shielding configurations to meet specific performance requirements. Designed for professional applications, these cables ensure consistent impedance and signal integrity across various installation scenarios.

Technical Specifications

Characteristic Impedance	50 Ohm
Available Cable Series	LMR400, LMR600, RG58, RG213, RG214

Application Features

Key Performance Indicators
