

50-Pair Patch Rack for Network Cable Management

This 50-pair patch rack is a network equipment component used for organizing and managing cable connections. It facilitates efficient cable management and troubleshooting with multiple connection points for terminating and patching network cables.

Product Overview

Professional Cable Management Solution

The 50-Pair Patch Rack is a specialized network component engineered for organizing and managing cable connections in high-density environments like server rooms and data centers. Designed for durability and stability, this rack facilitates efficient cable termination, patching, and troubleshooting. Its robust construction ensures long-term reliability, while the user-friendly design supports easy installation and maintenance, ultimately helping to reduce downtime and improve overall network performance.

Technical Specifications

Available Models

- KF-TJ-50(A)
- KF-TJ-50(B)

Capacity

50 pairs

Key Benefits

High-density connectivity, Efficient cable management, Easy installation, Improved network performance

Usage & Application

Best For

Server Rooms • Data Centers • Network Infrastructure
