

500-1500VA Standby Uninterruptible Power Supply

This standby UPS provides reliable power backup for sensitive electronic equipment. It features automatic voltage regulation (AVR) to stabilize fluctuating input voltage and surge protection to safeguard against power spikes.

Overview

Reliable Power Protection

The 500-1500VA Standby Uninterruptible Power Supply (UPS) is engineered to provide dependable backup power for sensitive electronic equipment. Featuring automatic voltage regulation (AVR) and integrated surge protection, it effectively safeguards connected devices against power fluctuations and spikes. Designed for versatility, this unit ensures continuous operation during outages, making it an ideal solution for computers, peripherals, and other critical business hardware.
