

500L Non-Pressure Solar Water Heater for Commercial Use

This commercial water tank has a capacity ranging from 400L to 5000L. The tank's material options include SUS 304 and 306, with thicknesses ranging from 0.5mm to 1mm.

Overview

Efficient Commercial Heating Solution

This 500L non-pressure solar water heater is specifically engineered for commercial environments, such as small hotels and similar facilities. By harnessing solar energy, it provides a cost-effective alternative to traditional water heating methods, significantly reducing energy dependency. The system features a robust design comprising a solar collector panel and an insulated water storage tank, ensuring consistent hot water availability.

Technical Specifications

Tank Capacity

500 L

Capacity

System Type

Non-Pressure • Solar Thermal

Included Components

- Solar collector panel
- Insulated water storage tank

Application

Target Use Case

Commercial, Small Hotel, Hospitality
