

5.5 HP Gasoline Engine for Power Generation

This 5.5 HP gasoline engine is designed for power generation and various industrial applications. It features a recoil starter, durable air filter, and a fuel tank suitable for extended operation.

Overview

Reliable Power Solution

This 5.5 HP gasoline engine is a compact and powerful solution designed for power generation and various industrial applications. Featuring an OHV (Overhead Valve) configuration for improved efficiency, it provides consistent performance for equipment like generators and water pumps. Engineered for durability, it includes a robust air-cooled system and a low-oil alert system to ensure long-lasting operation in both residential and commercial settings.

Technical Specifications

Power Output

5.5 HP
Horsepower

Engine Model	168F
Engine Type	OHV (Overhead Valve)

Features

Key Features

- Recoil starter for easy starting
- Air-cooled cooling system
- Low-oil alert system
- Durable air filter system

Usage Guidelines

Important Maintenance

Oil required before starting • No oil in unit upon delivery
