

550W Bifacial Dual Glass Monocrystalline Solar Module

This monocrystalline module utilizes advanced cell technology to capture sunlight from both sides. The dual glass construction ensures durability and resistance to harsh conditions, making it ideal for large-scale solar installations.

Product Overview

High-Performance Bifacial Solution

This 550W bifacial dual glass monocrystalline module is engineered for maximum energy generation by capturing sunlight from both sides of the panel. Its advanced cell technology and robust dual glass construction provide exceptional durability and resistance against harsh environmental conditions. Designed for versatility, it is an ideal choice for large-scale solar installations, commercial projects, and residential applications requiring enhanced performance and long-term reliability.

Technical Specifications

Power Output

550 W

Rated Power

Ideal Applications

- Large-scale solar farms
- Commercial solar projects
- Residential energy systems

Module Technology

Monocrystalline, Bifacial, Dual Glass
