

560 Series Hot Water Radiator

This radiator is suitable for both normal and high hot water pressure systems. It can also be used with steam at an operating pressure of 0.2 MPa.

Product Overview

560 Series Hot Water Radiator

The 560 Series hot water radiator is a compact and durable heating solution designed for professional installation. Built for efficiency, it supports both normal and high-pressure hot water systems as well as steam applications. With a sleek 560mm profile, it offers reliable thermal performance while maintaining a robust structural weight of 3.6kg.
