

5mm Red LED Indicator Light

This 5mm red LED is commonly used in experimental analytical instruments. It features a clear lens for optimal light output and is suitable for various indication and signaling applications.

Product Overview

High-Performance 5mm Red LED

This 5mm red LED indicator light is designed for precision applications, making it an ideal component for experimental analytical instruments. Featuring a clear lens for optimal light output, it ensures clear visibility and reliable performance. Its compact design and standardized sizing make it a versatile choice for various indication and signaling requirements.

Physical Characteristics

Diameter	5 mm
Lens Type	Clear

Technical Details

Light Color	Red
Model Reference	BT-45-30/31

Applications

Primary Applications

- Experimental analytical instruments
- Visual indication
- Signaling systems
