

60-Meter Offshore Supply Vessel

This 60-meter offshore supply vessel is powered by two 2100HP engines. It is designed to transport supplies and equipment to offshore platforms and has a large open deck for cargo.

Overview

High-Performance Offshore Support

This 60-meter offshore supply vessel is engineered for the demanding task of transporting supplies and equipment to offshore platforms. Powered by dual 2100HP engines, it offers reliable performance and stability in harsh marine environments. The design features a large open deck optimized for cargo handling and specialized offshore operations.
