Product Overview

High-Performance Triplex Plunger Pump

The KTZ600S is a reciprocating, volumetric, single-acting, horizontal three-cylinder plunger pump engineered for demanding industrial operations. With a maximum input braking power of 600HP, this unit is specifically designed for intermittent well operations including acidification, cementing, fracturing, and well killing. Its versatile design features a modular assembly comprising a power end, fluid end, and a reduction gearbox that can be mounted in 16 different positions.

Technical Specifications

Available Plunger Sizes

- 3 inch
- 3 1/2 inch
- 4 inch
- 4 1/2 inch

Max Input Power

600 HP

Pump Type

Reciprocating, Volumetric, Single-acting, Horizontal Triplex

Operational Features

Primary Applications

Acidification, Cementing, Fracturing, Well Killing

Gearbox Mounting Positions

16

Compatibility

Parts Compatibility

SPM Interchangeable
