Product Overview

High-Performance Architectural Aluminum

These custom-designed 6063 aluminum profiles are engineered specifically for curtain wall construction, offering a balance of superior strength and durability. The alloy composition provides excellent corrosion resistance, making these profiles suitable for both interior and exterior architectural applications. With precision engineering, they ensure seamless integration and a high-quality finish for modern building envelopes.

Material & Properties

Alloy Grade	6063 Aluminum
Key Material Benefits	Corrosion Resistant, High Extrudability, Structural Integrity, Precision Engineered

Application

Primary Applications

- Curtain wall systems
- Interior architectural projects
- Exterior architectural projects
- Modern building facades

Performance Highlights
