Product Overview

Professional Curtain System Solutions

This custom-extruded 6063 aluminum profile is engineered specifically for curtain wall and facade systems, combining structural integrity with cost-effective performance. Utilizing high-quality 6063 aluminum alloy, these profiles offer excellent corrosion resistance and workability for diverse architectural applications. The design features versatile internal channels and external T-slots, ensuring secure attachment and ease of installation for complex building projects.

Technical Specifications

Design Features

- Hollow rectangular cross-section for lightweight strength
- Toothed edge for secure integration
- Internal channels for versatile mounting
- External T-slot for flexible connection options

Material Grade

6063 Aluminum Alloy

Primary Application

Curtain Wall Systems, Facade Systems, Architectural Construction, Industrial Structural
