

6.0V 5000mAh Ni-MH Rechargeable Battery Pack

This high-capacity Nickel-Metal Hydride (Ni-MH) rechargeable battery pack is designed for applications requiring reliable and long-lasting power. With a capacity of 5000mAh, it provides extended run times compared to standard batteries.

Product Overview

High-Capacity Power Solution

This high-capacity Nickel-Metal Hydride (Ni-MH) rechargeable battery pack is engineered for applications requiring consistent, long-lasting power. Featuring a nominal voltage of 6.0V and a substantial 5000mAh capacity, it is designed to provide extended run times for high-drain devices. Its robust construction, utilizing D-size cells, ensures reliable performance in demanding environments such as power tools and emergency lighting systems.

Technical Specifications

| | |
|-----------------|------------------------------|
| Nominal Voltage | 6 V |
| Capacity | 5000 mAh |
| Chemistry | Ni-MH (Nickel-Metal Hydride) |
| Cell Size | D-size |

Key Features

Design & Build

- White cylindrical housing
- Secure end caps for cell protection
- Color-coded wiring (Red/Black) for polarity identification

| | |
