

6.5 HP Single Cylinder Gasoline Engine

This 6.5 HP gasoline engine is designed for a variety of applications. Its durable construction and efficient design make it suitable for powering equipment such as generators and water pumps.

Overview

Reliable Power for Industrial Equipment

This 6.5 HP single-cylinder gasoline engine is engineered for durability and consistent performance across a variety of power equipment applications. Featuring an overhead valve (OHV) design, it offers enhanced fuel efficiency and power output. The unit is built for easy maintenance and reliable operation, making it an ideal choice for generators, water pumps, and other machinery requiring dependable power.

Technical Specifications

Power Output

6.5 HP

Horsepower

Engine Configuration

Single Cylinder, 4-Stroke, OHV

Fuel System

Gasoline

Features

Key Features

- Overhead Valve (OHV) design for efficiency
- Compact and lightweight construction
- Integrated air cleaner assembly
- Easy-to-use manual controls
- Cooling fins for thermal management

Safety & Maintenance

Safety Compliance

Flammable Fuel Warning • Cool-down Required • Safety Labels Included
