

6D95 Engine Cylinder Block

This engine cylinder block is a key component for automobile engines, specifically designed for durability and performance. It is manufactured to meet high standards, ensuring compatibility and reliability for automotive applications.

Product Overview

High-Performance Cylinder Block

This cylinder block is precision-engineered specifically for 6D95 engine models. It is constructed from robust materials designed to withstand high combustion pressures and temperatures while ensuring optimal durability. Featuring advanced cooling passages and precision-bored cylinders, it provides the structural integrity required for reliable engine performance.

Technical Specifications

Key Design Features

- Precision-engineered cylinder bores
- Optimized coolant passages
- High-pressure thermal resistance
- Standardized mounting points for easy assembly

Engine Compatibility	6D95
----------------------	------

Logistics

Packaging Standard	Free-fumigation wooden box
--------------------	----------------------------
