

7 HP Gasoline Engine for Generators

This 7 HP gasoline engine is designed for power generation and other equipment. It features a robust construction and efficient combustion for reliable performance.

Overview

Reliable Power for Industrial Applications

This high-performance gasoline engine is engineered for versatility and durability in demanding environments. Featuring an overhead valve (OHV) design, it delivers improved fuel efficiency and consistent power output for generators, water pumps, and other essential equipment. Its compact, robust construction ensures long-lasting operation and reliable performance, making it an ideal choice for professional power generation needs.

Technical Specifications

Power Output

7.5 HP
Horsepower

Fuel Type	Gasoline
Engine Design	Overhead Valve (OHV)
Starting Method	Recoil Starter

Applications

Primary Applications	Power Generators, Water Pumps, Industrial Equipment
----------------------	-----------------------------------------------------

Maintenance

Air Filter Service Interval	Every 50 hours (more frequent in dusty conditions)
-----------------------------	----------------------------------------------------
